Additional details

Sound ID identification

Sound IDs are unique identifiers for recordings on platforms that let users add music to their UGC posts. This report focuses on Sound IDs associated with UGC posts (creations) that use your music (assets). Please note, we match your music against UGC posts — not the sounds added from the platform's library.

Misattributed creations caused by audio misuse

Due to audio misuse by users, not all Sound IDs identified in this report actually contain your assets. Users misuse audio to exploit platform recommendation algorithms, which prioritize posts with popular library sounds. Here's how it typically works:

1. The user uploads a video containing your music
2. They add an official library sound during editing
3. They mute the added sound (set its volume to zero), leaving your asset as the only audible audio
4. The platform promotes the post, assuming it features a trending sound
