EXPERIENCE

Lead User Experience Designer at The Library Corporation

Austin, TX | Feb. 2011 - Present

- Lead UX Designer for Library.Solution, a suite of library automation software used by thousands of school and public libraries around the world.
- Led design effort to modernize the product suite, which was a major factor in securing long term contracts from large organizations like Chicago Public Schools, Dallas Independent School District, and the Hawaii Department of Education.
- Engaged current users in research interviews and surveys to determine their most urgent needs.
- Led brainstorming sessions with product management to create personas and problem statements.
- Created wireframes using Balsamiq to explore potential solutions to problem statements.
- Presented low fidelity prototypes to stakeholders using Balsamiq to gain consensus on a solution.
- Continuously iterated on wireframes, based on feedback from users and stakeholders, to refine the solution.
- Presented high fidelity Photoshop mockups and Figma prototypes to the product management team and delivered them to developers along with detailed functional requirements.
- Created and documented a style guide of UI/UX patterns to provide the framework needed to create a visually and functionally seamless user experience across all products in the product suite.
- Collaborated with the Principal Developer to implement custom components (HTML/CSS/JS) for commonly used UI patterns, so they can be used consistently and be more easily maintained/updated across products.
- Designed an award-winning (2018 Modern Library Awards Platinum Award) cataloging application (LS2 Cataloging) that revolutionized the way libraries catalog their collections by making data entry more intuitive.
